

Part 637 - Environmental Engineering

[Chapter 2 - Composting](#)

(11/2010)

637.0200 Introduction

637.0201 Principles of composting

637.0202 Design of compost mixtures

637.0203 Monitoring and parameter adjustment

637.0204 Odor generation

637.0205 Additives, inoculums, starters

637.0206 Pathogens

637.0207 Health risks of a composting operation

637.0208 Aeration requirements

637.0209 Analysis of raw materials and compost

637.0210 Composting methods

637.0211 Operational costs

637.0212 Compost end use

637.0213 Dead animal composting

637.0214 Compost bedded packs

637.0215 References

[Chapter 3 - Constructed Wetlands](#)

(09/2002)

637.0300 Introduction

637.0301 Types of constructed wetlands

637.0302 Benefits of surface flow wetlands for animal waste treatment

637.0303 Treatment process

637.0304 Vegetation

637.0305 Planning for a constructed wetland—the systems approach

637.0306 Design of surface flow wetlands

637.0307 Plant establishment and maintenance

637.0308 References

[Chapter 4 Solid-Liquid Separation Alternatives for Manure Handling and Treatment](#)

(08/2019)

637.0400 Introduction

637.0401 Methods of solid-liquid separation

637.0402 Influence of manure characteristics and handling methods on selection of solid-liquid separation process

637.0403 Fundamentals of solid-liquid separation

637.0404 Measures of solid-liquid separation performance

637.0405 High-rate solid-liquid separation

637.0406 Unique applications of solid-liquid separation technology

637.0407 Design considerations

637.0408 References
